C E R T I F I C A T I O N S

RESPONSIVE WEB DESIGN
freeCodeCamp

300 hours of coursework (about 2 weeks) completed, as well as 5 required beginner projects.

ADVANCED CSS AND SASS: FLEXBOX, GRID, ANIMATIONS
Udemy

28+ hours of video training on complex CSS animations, advanced responsive design techniques, flexbox and grid layouts, Sass, CSS architecture, fundamental CSS concepts, and much more.

MODERN JAVASCRIPT: ES6 BASICS
Cousera Project Network

Master the fundamental ES6 features and understanding the reasoning behind it.

CSS VERIFIED
HackerRank

Covers topics like exploring cascading and inheritance, text styling fundamentals,understandingthe use of layout in CSS, understand the boxing of elements in CSS, among others.

JAVASCRIPT ESSENTIAL TRAINING
LinkedIn Learning

Understanding JavaScript piece by piece, from core principles like variables, data types, conditionals and functions through advanced topics including Loops and DOM scripting.

HTML ESSNTIAL TRAINING
LinkedIn Learning

Learnt how to craft excellent HTML with the pieces HTML itself has to offer. Highlights the fundamental HTML concepts and semantic markup: tagging content as what it is, and not just for formatting, convention or convenience.

PROJECTS

TASK TRACKER
- CSS REACT

○ The task tracker is a web application built was part of a group project for the ongoing LightHall Internship competition. I developed the task manager page that users interact with after logging in. We built a MERN web app and employ React as the front-end library. The task manager allows users to perform a range of actions such as adding, editing, and deleting tasks, as well as sorting them by various criteria like title, status, and due date. I was responsible for implementing the logic for these actions. I was very happy about this project because it helped me learn more on React, linking Frontend with the Backend and working collaboratively with a team using GitHub workflow.

GITHUB REPOSITORY
- CSS REACT

• This is a web app that displays a user's repositories using the GitHub API. This app allows anyone to easily search for a GitHub repository with their username and view the repository's details

TIP CALCULATOR
- HTML CSS JAVASCRIPT

• This is a tip calculator that calculates the correct tip amount and total bill per person. It has a "Custom" button where you can enter a specific tip percentage. This is a solution to the "tip calculator" frontend mentor challenge

PHONIE APP
- HTML CSS JavaScript

• The Phonie Project is a web-based application created by the team "Phantom_Devz" that determines the telecom carrier based on a phone number entered by the user

DUPLICATE REMOVAL
- SCSS REACT

• This is an app with two screens. The first screen takes user input and, upon submission, redirects to screen two, which displays the entered string as cards. Each card displays a single character from the string, and each character's duplicate instances can be removed by clicking the delete icon. If a character has no duplicates, it will remain on the screen. If there are no duplicate characters in the string, a success header is displayed. The original and updated strings are also displayed.

RANDOMPEOPLEAPP
- CSS REACT FIREBASE

• This is a web app that displays random people and their info. The data is generated from randomuser API.

CHASING CLICK
- SCSS REACT FIREBASE

• The app allows users to track the number of clicks on and their location in realtime. The app render's the user's location on a map and allows users to click on a button to increase the click count and record the location where the click occurred

EDUCATION

DIPLOMA
COMPUTER SOFTWARE ENGINEERING
AltSchool Africa School of Engineering
2022 - 2023

NATIONAL DIPLOMA
SCIENCE LABORATORY TECHNOLOGY
Lagos State Polytechnic
2015 - 2018
