SKILLS

- HTML5
- CSS3
- SASS

- JavaScript
- React
- VueJs

- MongoDB
- Firebase
- Soft Skills

PROJECTS

HOSPITOFIND
- MERN STACK, REACT, TYPESCRIPT

- Access to healthcare in Nigeria can be very difficult and painstaking. Quite absurd being that the first thing to living is being healthy. HospitoFind is a simple tool that aims to help any user find, export, and share hospitals within the region.

MACHALA LAUNDRY
- SCSS, REACT, FIREBASE

- I built Machala Laundry Service website from scratch. I created a user-friendly platform that showcases their laundry services. The website features convenient functionalities such as online booking, live chat, and the business google reviews. I optimized the website for optimal loading speed and performance. Additionally, I managed the hosting setup, ensuring a secure and reliable online presence. It was a fulfilling experience to contribute to the success of Machala Laundry Service by delivering a professional and functional website that meets their needs and engages their customers.

HANGPANDA GAME
- MERN STACK, TAILWIND CSS

- This game is a team project for LightHall super league which I took part in. It is a web-based game built with React and Tailwind CSS. It is a simple game where the user guesses a word by selecting letters from the alphabet. The user has 7 lives and loses a life for every wrong guess. The game ends when the user guesses the word correctly or loses all their lives. There is has a LeaderBoard that displays the top players and their scores. The leaderBoard is implemented using MongoDB and Express. The game also allows user to set their own word for a single session and then a generate link for it.

GITFOLIO
- CSS, REACT

- This is a web app that displays a user's repositories using the GitHub API. This app allows anyone to easily search for a GitHub repository with their username and view the repository's details

TASK TRACKER
- CSS, REACT

- Task Tracker is a team project for LightHall super league which I took part in. We built a MERN web app and employ React as the front-end library. I developed the task manager page that users interact with after logging in. The task manager allows users to perform a range of actions such as adding, editing, and deleting tasks, as well as sorting them by various criteria like title, status, and due date. I was responsible for implementing the logic for these actions.

TIP CALCULATOR
- HTML, CSS, JAVASCRIPT

- This is a tip calculator that calculates the correct tip amount and total bill per person. It has a "Custom" button where you can enter a specific tip percentage. This is a solution to the "tip calculator" frontend mentor challenge

PRESTIGEENIGMA
- REACT

- PrestigeEnigma Advocates website is a user-friendly platform that showcases the legal services of a fictional law firm.
